## Web and Mobile Developer

**Passion for building progressive, modern applications** capable of fulfilling clients needs as well as engaging the intended audience by being attentive to usability and accessibility.

**Researching and implementing open source software** to keep costs down while ensuring the use of modern technological features compatible with current project.

**Utilizing technology to effectively communicate** and work with designated team and managers as needed.

**Analyzing external influences and adjusting requirements** accordingly throughout the projects lifecycle.

## PROFESSIONAL EXPERIENCE

### Web and Android Application Development Intern

#### MySocialReach, Remote Position, 2015 - 2017

Began as a web development intern tasked with developing scripts to integrate the MySocialReach (MSR) app with various third-party APIs (e.g., Facebook). Currently aiding the development of the native Android mobile application.

- Delivered new data analytics for MSR clients using third-party APIs.
  - Integrated MSR backend with Facebook's API, using PHP, to allow clients to monitor user engagement with their business page.
- Implemented a third-party framework, Auth0, for user authentication within the Android app.
